This work is licensed under a Creative Commons Attribution 4.0 International License.

Dataset

The Mushroom Dataset by Jeff Schlimmer

Details of the dataset

# of Sample	8124 [48.20% positive 51.80% negative]
# of Attribute/Feature	22 [21 is used]
Classification Category	binary classification

Network Structure

This work is licensed under a Creative Commons Attribution 4.0 International License.

Network Structure

Network Structure

Network type	Fully connected network
# of layers	3 [1 Input 1 Hidden 1 Output]

Hyperparameters

Train-Test	80% / 20%
Batch size	25 samples
Iterations	<3000
Learning Rate	0.01
Optimizer	Adamax
Loss function	MSE

Activation function: $\tanh()$

$$y = f(Wx + b)$$

This work is licensed under a Creative Commons Attribution 4.0 International License.

Results and Discussions

Training and Testing

	Training Set	Test Set
Accuracy	100%	100%
Error	0%	0%

Which model is the best?

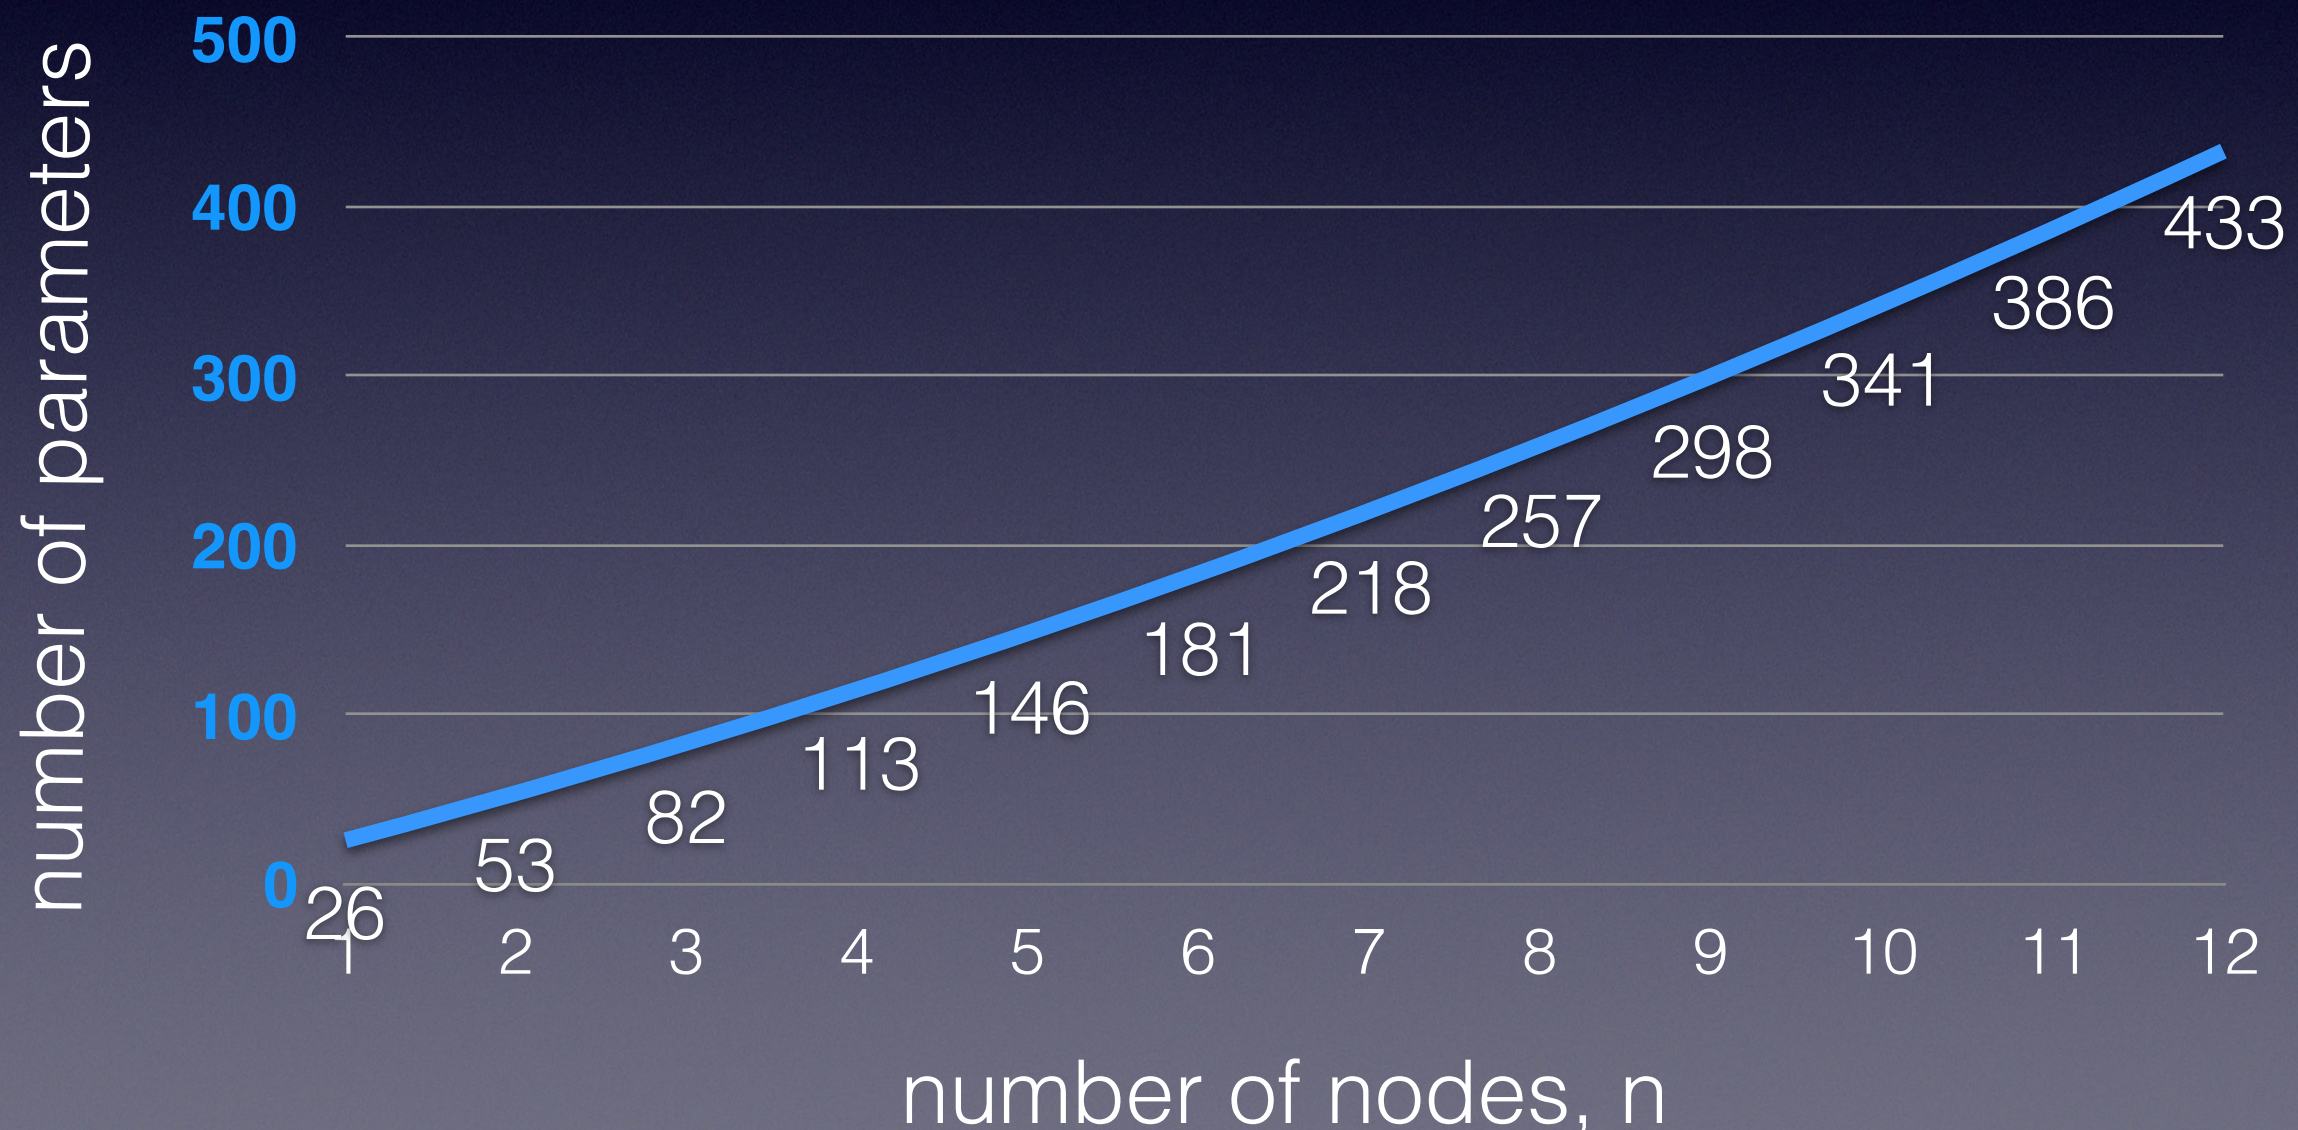

- Number of **parameters**
- Speed of **convergence**

Results and Discussions

- The simplest network structure that can generalize is [3 3 1] (82 parameters).
 - Overfitting can be seen in [2 2 1].
- Reducing number of features can reduce complexity of the network.
- Some features can be transformed into one-hot feature vector.

THANKS ...
